

# Automation for iOS

*Calaba.sh*

# Target !!

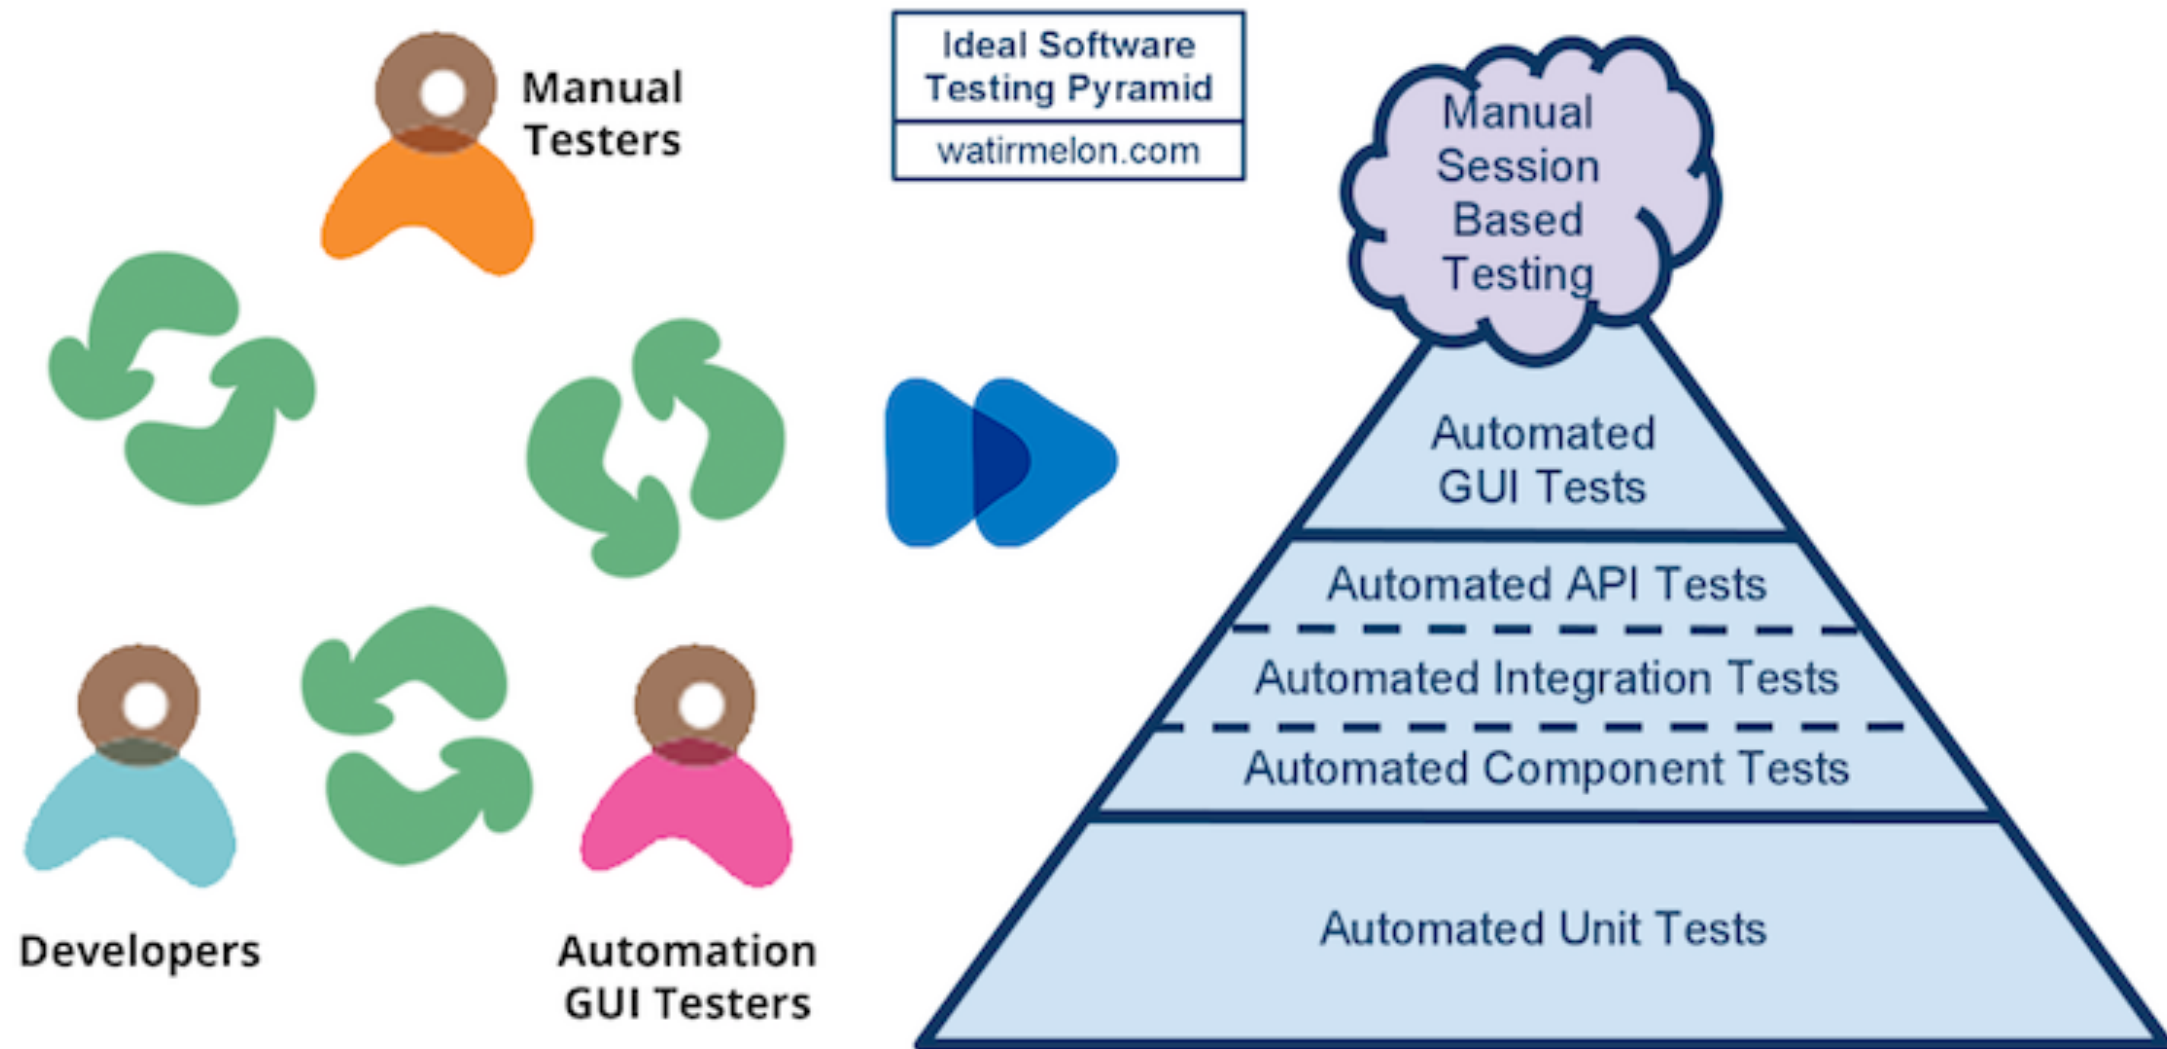

*Calaba.sh*

**Jenkins**

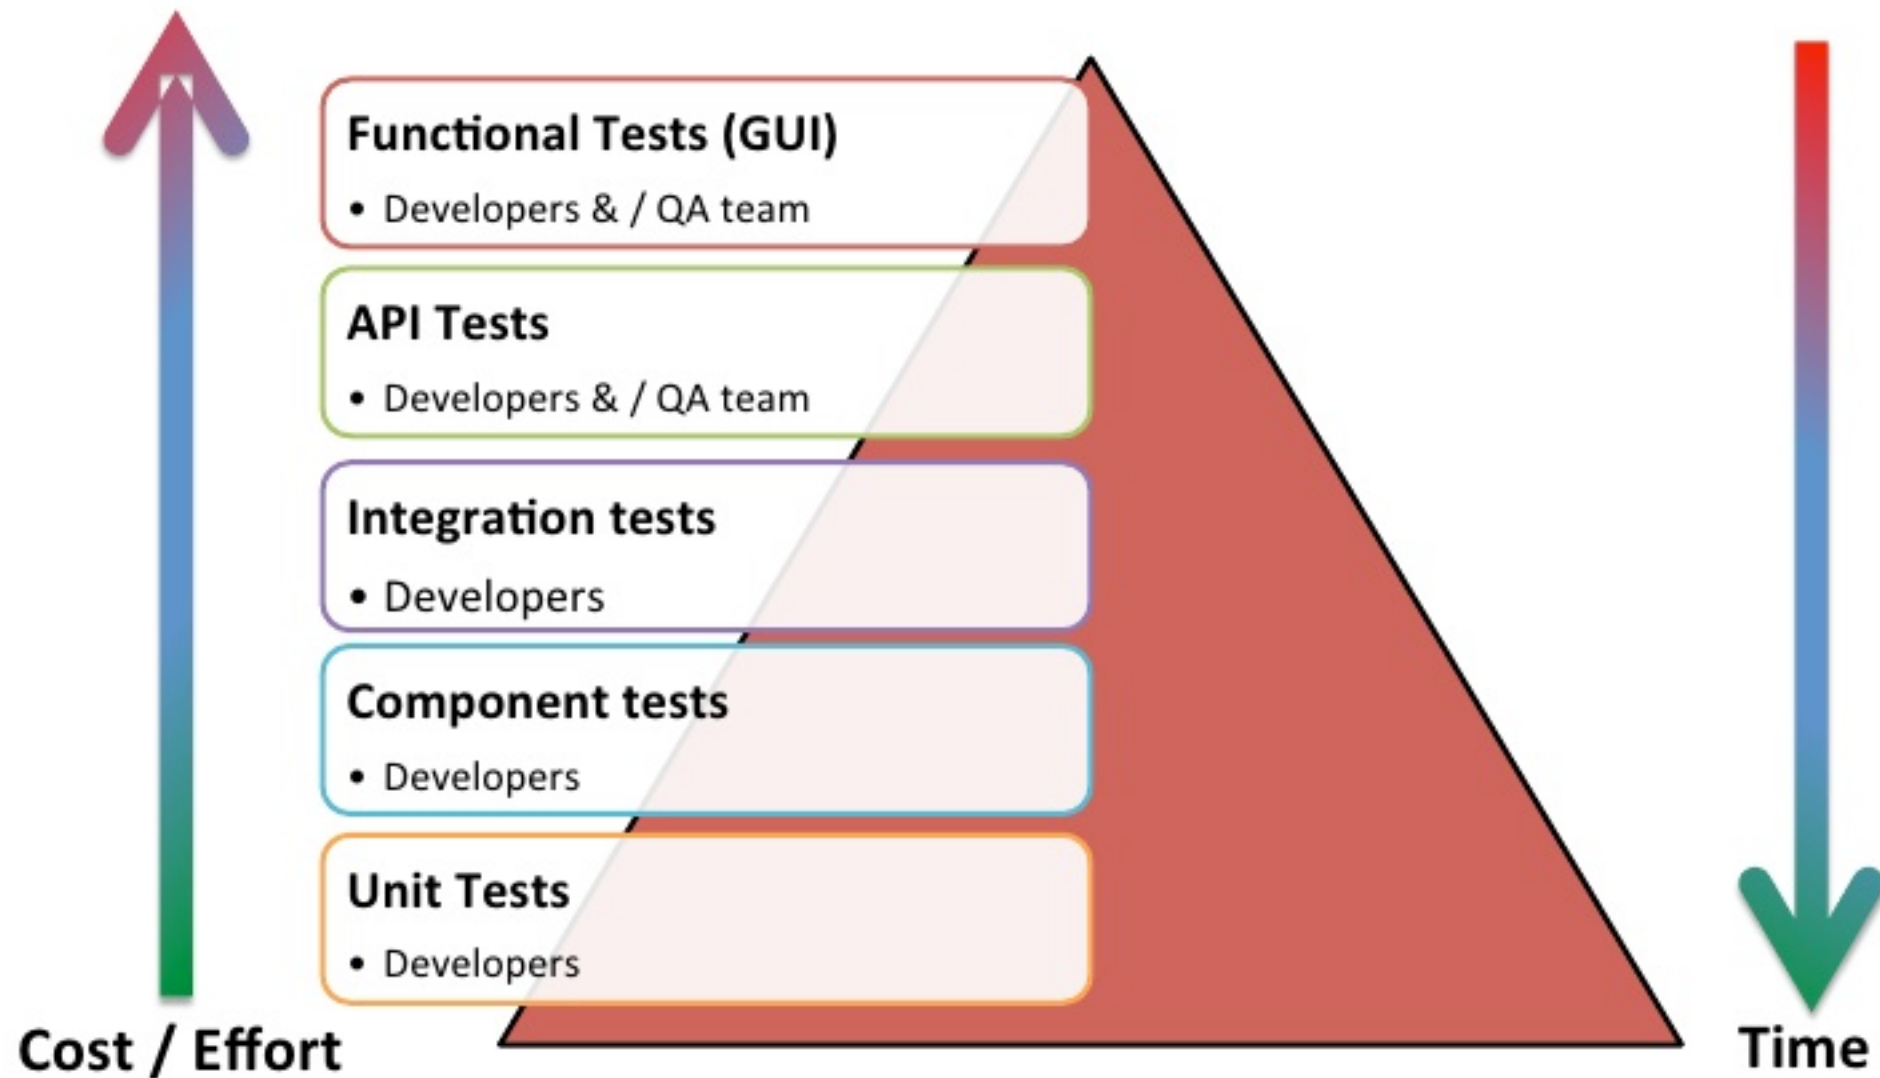

ios

# Pyramid testing

# Pyramid testing

## Ideal Test Pyramid

# Cycle of Automation test

1. Setup data
2. Run tests
3. Validation

# Software requirement

1. Ruby + Gem
2. Xcode

# Installation

\$ gem install calabash-cucumber

# Generate project

```
$ calabash-ios gen
```

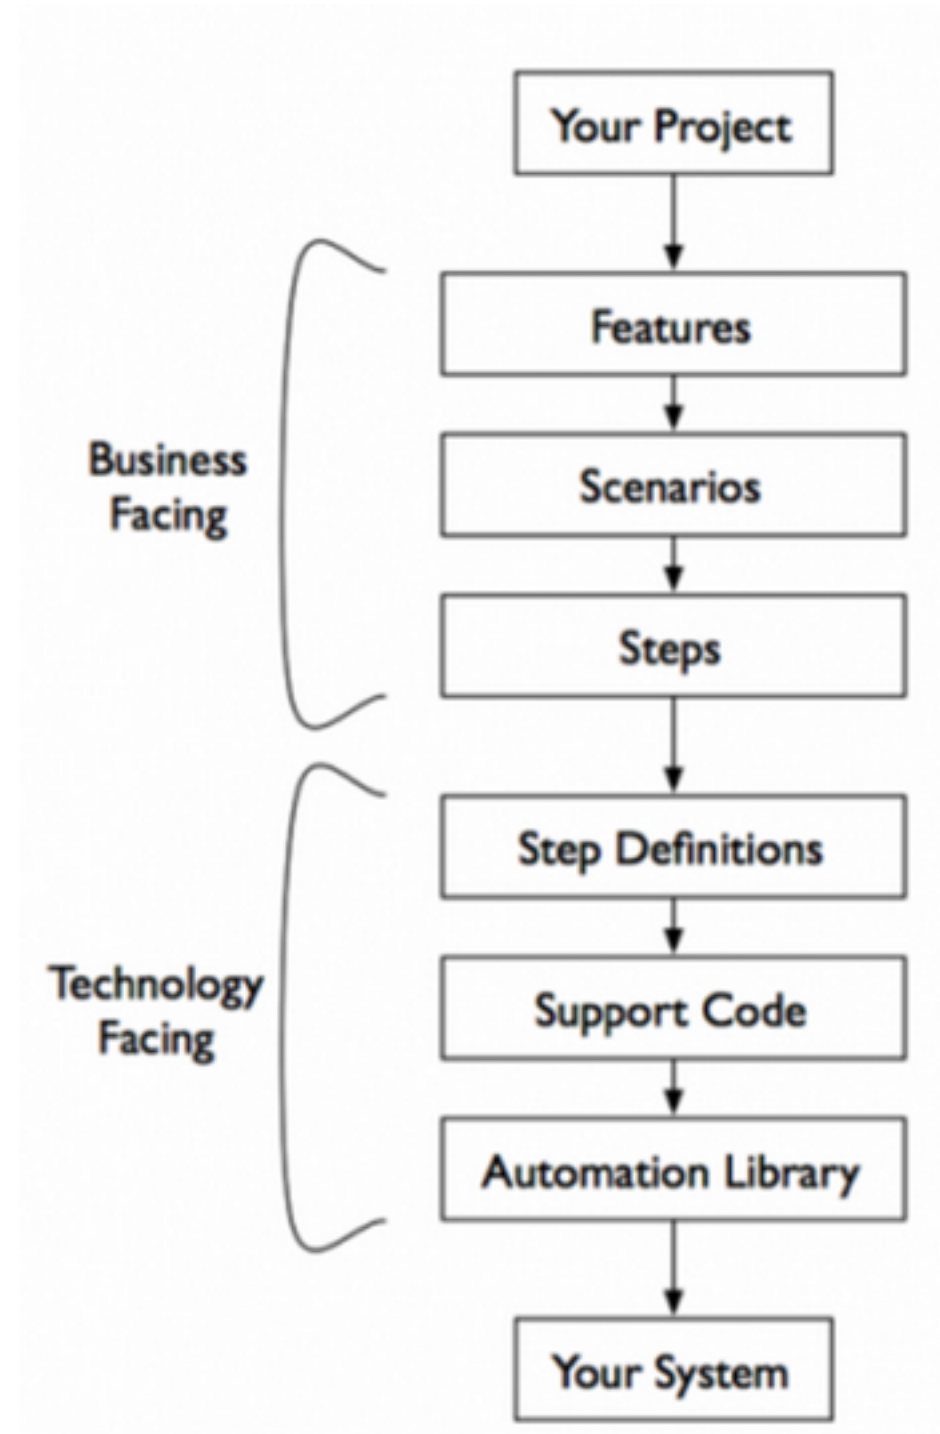

```
features/  
├── my_first.feature  
├── step_definitions  
│   ├── calabash_steps.rb  
│   └── my_first_steps.rb  
└── support  
    ├── 01_launch.rb  
    ├── 02_pre_stop_hooks.rb  
    └── env.rb
```

# Architecture

# Cucumber stack

# Feature

```
my_first.feature
1 Feature: Login feature
2
3 Scenario: As a valid user I can log into my app
4   When I press "Login"
5   Then I see "Welcome to coolest app ever"
```

# Given When Then

**Given** -> to put system in known state

**When** -> to describe the action

**Then** -> to observe outcomes

**And, But**

<https://github.com/cucumber/cucumber/wiki/Given-When-Then>

# Step Definitions

Define in **features/step\_definitions/\*\_steps.rb**

Write in Ruby language

# Cucumber

Write in **Gherkin**

Domain Specific Language (DSL)

Business readable

Support 40 languages

<https://github.com/cucumber/cucumber/wiki/Gherkin>

# English

```
"en": {  
  "but": "*|But",  
  "and": "*|And",

# Cucumber + Calabash

# Layer of cucumber

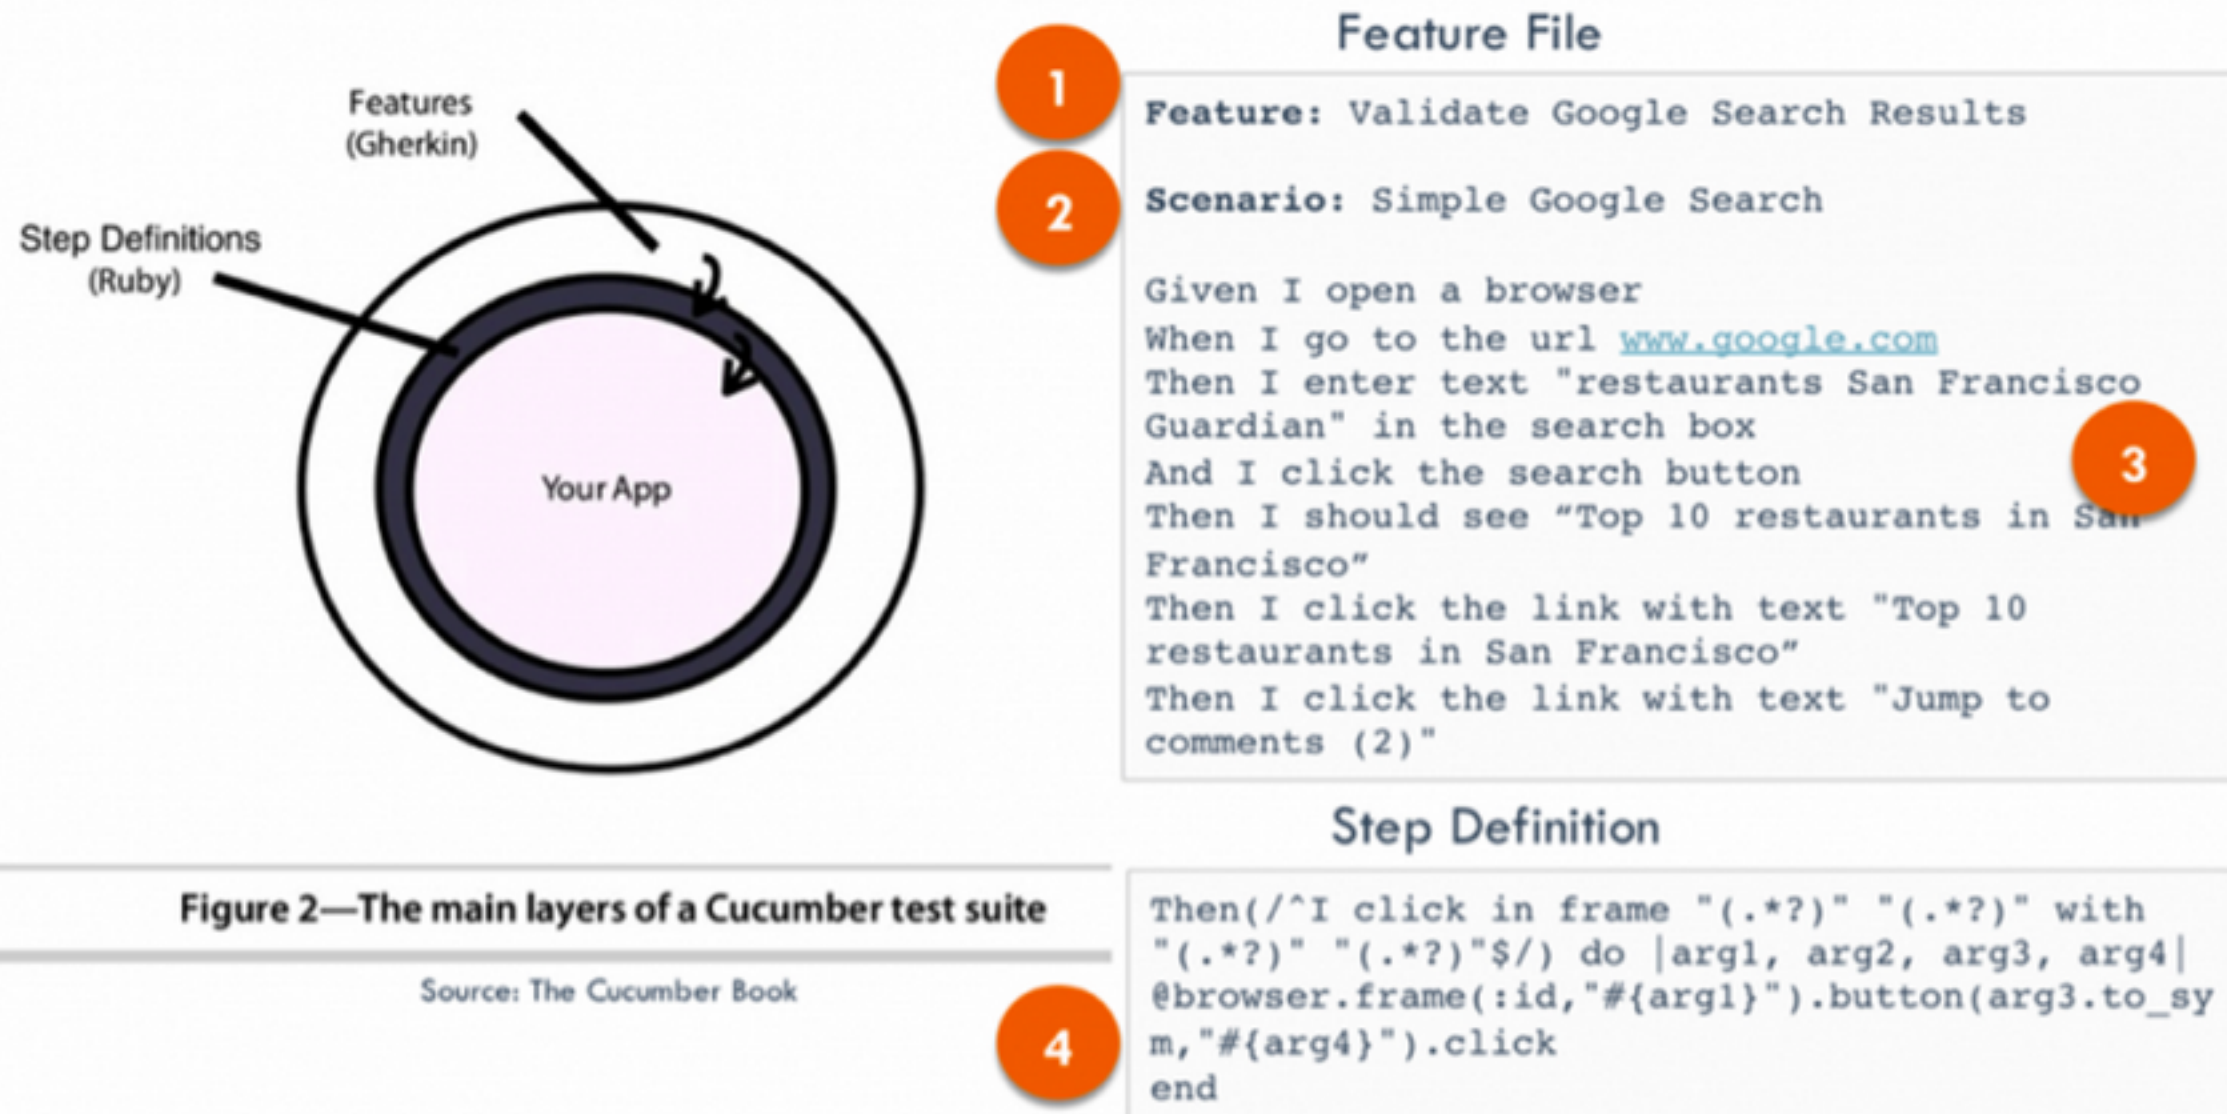

Figure 2—The main layers of a Cucumber test suite

Source: The Cucumber Book

# Write first feature

# Before start

Create or Open your project in Xcode

# Download calabash framework

```
$ calabash-ios download
```

# Setup calabash

```
$ calabash-ios setup
```

# Create features

\$ calabash-ios gen

# Run calabash

\$ cucumber

# Problem

Not set APP\_BUNDLE\_PATH

Solve

```
APP_BUNDLE_PATH=/Users/<name>/Library/  
Developer/Xcode/DerivedData/<project>-  
belsuhpuqthqjvgbweiiutbbdwej/Build/Products/  
Debug-iphonesimulator/<project>-cal.app
```
